

Experience - Competence - Reliability

West Wind Aviation - New Passenger Terminal - Saskatoon

Saskatoon, SK

Planning Study
Schematic Design

Rajani Blaser Mannix has been retained by West Wind Aviation to develop a new passenger terminal for Saskatoon as part of a 3 stage process to develop and expand their facilities in Saskatoon. The eventual project will lead to a new, larger, integrated facility to serve the existing maintenance, executive and charter services while serving a rapidly growing demand due to the booming economy.

The new terminal includes an ongoing planning and evaluation process, working with passenger flows, security requirements and service personnel to produce a seamless charter experience. Consideration has also been given to the overall image of the building as it will now serve as the renewed identity for West Wind in Saskatoon and beyond.
